

## **ANEXO 1**

El procedimiento de recepción y verificación de la señal radiodifundida, hasta la elaboración de los testigos de grabación conlleva un proceso operativo que se describe a continuación:

El proceso inicia con la recepción de señales misma que se lleva a cabo a través de antenas de señales de radio y televisión, dichas señales según el caso, se integran a sintonizadores de radio y de televisión los cuales se interconectan con los equipos digitalizadores, mismos que realizan la grabación de las señales, finalmente los archivos digitalizados se almacenan en equipos denominados librerías de respaldo donde reside el histórico de grabaciones.

A través de los equipos digitalizadores, se cuenta con la funcionalidad para acceder a las grabaciones de radio y televisión, misma que permite realizar consultas a segmentos de grabación por emisora (radio y televisión), día y hora.

A partir de las pautas correspondientes, se realiza la verificación de las transmisiones (radio y televisión) identificando los incumplimientos, respecto de lo establecido en dichas pautas.

Por medio de la funcionalidad antes referida, se realiza la generación de testigos (segmentos de grabación) los cuales se obtienen seleccionando el inicio y fin del segmento de interés y de forma automática se genera un archivo digital, ya sea de audio ó de video en el cual se integra la marca de tiempo (fecha y hora) que el propio sistema establece.

Es importante mencionar que en este procedimiento hay que considerar los siguientes factores:

1. Para ubicar un fragmento de video en el sistema, es necesario que dicho video este correctamente grabado en el sistema, así como esté correctamente indexado para poder acceder a él.
2. El sistema graba en fragmentos de 1 hora de duración, al final del cual hace un cambio o “salto” al siguiente archivo de 1 hora, por lo que el salto de un bloque a otro presenta retrasos en la continuidad de la grabación.

**CONSEJO GENERAL  
EXP. SCG/PE/CG/070/2009**

3. No obstante que el sistema puede generar testigos de más de una hora, se recomienda realizar los testigos de 1 hora de duración, para asegurar la continuidad e integridad de la información.

4. En caso de existir algún error o problema en la continuidad del testigo, es necesario reindexar el video grabado lo cual conlleva un proceso de aproximadamente el 40% de la duración del video que se quiere indexar.

5. Una vez que el video se encuentra correctamente indexado y que no hubiera problemas al momento de generar el testigo, dicho proceso dura aproximadamente 1/4 parte de la duración del testigo a generar, esto es, la generación de un testigo de 1 hora toma aproximadamente 15 minutos.

6. De esta forma, para generar un testigo de 18 horas se requieren 4 horas y media en generar solo dicho testigo estando en sitio, considerando que no se presenten interrupciones o "saltos" en la grabación, de lo contrario el proceso debe de iniciarse nuevamente.

7. Una vez generado el testigo, sigue la grabación del testigo en DVD lo cual conlleva aproximadamente una 1/3 parte de la duración del video, por lo que para el ejemplo que nos ocupa, esta operación requeriría de 6 horas adicionales para grabar los testigos de dichas 18 horas a DVD.

8. Por lo que hace al envío de los testigos desde el lugar de generación, se realiza por medio del enlace FTP, lo que en promedio requiere una tercera parte de la duración de total lo que nuevamente implica 6 horas en promedio para enviar un testigo de 18 horas.

Así las cosas el proceso integral de generación de testigos conlleva un promedio de, 16:30 por cada 18 horas de grabación.
